ND 600sv Drainage System

ND 600sv Drainage System

High-performance CE-marked drainage system with an innovative dimple design made out of recycled high impact polystyrene. The core of the ND Drainage System is a perforated, vapour-permeable dimpled sheet with a very high compressive strength, an excellent creep resistance guaranteeing a consistent long term drainage capacity and a construction height of approx. 13 mm. A special mono-filament woven geotextile is bonded to each dimple as a filter layer.

A vapour-permeable geotextile is glued to the back of the dimpled sheet as a separation and protection layer of the XPS insulation panels. The geotextiles are glued and not thermally bonded to the dimpled core to avoid damage to the mechanical and hydraulic properties of the geotextile and the drainage system. It also prevents the geotextile to be pushed in between the dimples obstructing the drainage capacity.

Application

The ND 600sv Drainage System is a component of the Nophadrain Trafficable System for cars that acts as a filter, drainage and protection layer on an inverted roof construction.

Technical specifications

- Material dimpled sheet: recycled high impact polystyrene (HIPS)
- Material woven geotextile filter: polypropylene (PP)
- Material vapour-permeable geotextile: polypropylene (PP)
- Construction height: approx. 13 mm
- Compressive strength: approx. 900 kPa
- Perforations/m²: approx. 1,540 / ø 6.3 mm
- Weight: approx. 1,315 g/m²
- Drainage capacity at i = 1 at 20 kPa: approx. 5.27 l/(s.m)
- Drainage capacity at fall ratio 2 % at 20 kPa: approx. 0.72 l/(s.m)
- Test: performance test at the Technical University Munich (D) - assessment of the performance and behaviour of a pavement structure under simulated traffic conditions.

Product	Dimensions (L x W)	Packaging
ND 600sv Drainage System	approx. 32 x 1.25 m	approx. 40 m ² , roll
