

TECHNICAL DATA SHEET

ND SV-300M Protective Geotextile

ND SV-300M Protective Geotextile

The approx. 3.2 mm separation and protection geotextile provides reliable protection for roof waterproofing and root barrier membranes against mechanical damage.

In addition to its protective function, it serves as an extra water retention layer and effectively separates incompatible materials within the roof build-up, contributing to the long-term performance of the green roof system.

It is particularly suitable for installation beneath drainage systems and water retention elements in extensive green roof systems.

Application

The ND SV-300M Protective Geotextile has been developed for use in extensive green roof systems, with or without water retention.

Properties

- Material: recycled Polyester (PES), mechanically bonded
- Thickness: approx. 3.2 mm
- Color: multicolor

Product	Dimensions (L x W)	Weight
ND SV-300M Protective Geotextile	approx. 2 x 100 m approx. 200 m ² per roll	approx. 300 g/m ²
